CAN YOU TELL IF THI5 WAS WRITTeN BY A HUMAN?

A.I. research centres around a number of questions, including: How do intelligent machines think of what to do? How can we think of something not thinking? What are the rules, assumptions and biases that will enable machines to do that?

The main challenge with A.I. is not how to make a machine intelligible but rather in how to ensure that the machine does not violate anything about the real world.

Flinders' Bachelor of Computer Science (Artificial Intelligence) gives you the opportunity to study at the leading edge of A.I. science. Learn how artificial intelligence is integrated into areas as diverse as health, online shopping and driverless transport.

Get future ready. Study Flinders Artificial Intelligence.

Bachelor of Computer Science (Artificial Intelligence)
SATAC: 244221
Duration: 3 years full-time (or equivalent part-time)

Bachelor of Computer Science (Artificial Intelligence) (Honours)
SATAC: 244231
Duration: 4 years full-time (or equivalent part-time)
